Report on “National Pollution Control Day: Air Pollution and Climate Change”

Air pollutants have a complex relationship with climate change. Some pollutants, such as black carbon and ozone, increase warming by trapping heat in the atmosphere, while others, such as sulfur dioxide forming light reflecting particles, have a cooling effect on the climate. So, to avoid air pollution in campus we have a lane where vehicles are not allowed in the institution. Students got awareness on air pollution and also they came to know that there are having several problems like lungs problem, cough and various varieties of diseases and got good knowledge on how to avoid pollution.
